

Quality Hardwood Cold Frame & Planthouse

Our cold frames and plant houses are manufactured from high quality, FSC certified solid acacia timber, with black powder coated rust proof fittings. U.V. stabilised, twin walled polycarbonate glazing provides maximum insulation, whilst providing a filter against scorching sun. The front rail of the lid section has a series of drainage holes to prevent water from accumulating against the timber during long periods of wet weather. Galvanised steel anchor plates underneath provide extra stability. Flat packed, products can be assembled easily with only a screwdriver.
