

Speedhoe™

A whole new angle on Hoes

**FASTER
EASIER
SHARPER**

The amazing SpeedHoe is strong and easy to use and will soon become your best friend in the fight against weeds, or heavy and lumpy soil.

Why is SpeedHoe so effective?

- 1 The unique angle of the stainless steel head allows perfect positioning of the blade for both forward and backward strokes with minimum movement/ articulation. This reduces bending, minimising aches and strains.
- 2 The twin points at the rear dig sharply into the ground, naturally drawing the blade downwards as it travels through the soil.
- 3 The curved shape of the rear blades creates a slicing action through soil and roots. This results in a smooth yet amazingly powerful ploughing action, which cuts easily through weeds and breaks up hard soil without the need for hacking or digging.
- 4 The overall triangular shape of the blade creates a stability that prevents the hoe from twisting, producing a controlled and even cut.
- 5 The single front point produces less resistance for the naturally less powerful forward stroke, helps to guide the blade in the direction of the force applied, giving excellent control for easy and accurate hoeing between narrow rows of precious plants.

Garden News
 "The angle of the stainless steel head allows perfect positioning of the blade for forward and backward strokes with minimum bending"
 May 2010

Amateur Gardening
 "It made tilling the soil a great pleasure... (it) lived up to its speedy name and was just as useful down at the allotment ...a fantastic tool for drawing drills to sow seeds"
 Top Score 5/5
